

## Functional Requirements: Basic Report

The program **must be able to**:

**RF1: *Load*** the information from a selected file in the computer's file system.

**RF2: *Display*** the complete information in a spreadsheet-like table component.

**RF3: *Show*** all possible values of the types in a combo-box allowing the user to select one of these.

**RF4: *Filter*** the data so that in the table where they are displayed, only the rows whose type of column is selected remain.

**RF5: *Generate*** a bar chart based on the number of municipalities per department.
